The Fund may also use derivatives for investment purposes.

The Investment Manager actively makes the investment selection decisions for the Fund.

You can buy and sell shares on any full bank business day in Luxembourg.

For full investment objectives and policy details please refer to the Prospectus.

This is an accumulation share class and any income from the Fund will remain in the Fund and is reflected in the share price.

RISK AND REWARD PROFILE

- This indicator is based on historical data, calculated using European Union rules, and may not be a reliable indication of the future risk profile of the Fund.
- The risk and reward category shown is not guaranteed to remain unchanged and may change over time. The lowest category does not mean 'risk free'.
- The value of investments and the income from them will change over time.
- The Fund price may fall as well as rise and as a result you may not get back the original amount you invested.
- The Fund has been allocated a risk number based on the historic volatility of its share price or where insufficient information is available appropriate asset classes.
- **Credit risk:** A bond or money market security could lose value if the issuer's financial health weakens. Below investment grade bonds (also known as high yield securities) typically have greater credit risk than investment grade securities.
- **Default risk:** Issuers of certain bonds or money market instruments could become unable to make payments on their bonds, causing a reduction in income to the Fund and also in the value of bonds held by the Fund. Under extreme market or economic conditions, defaults could be widespread and their effect on Fund performance significant.
- **Derivatives risk:** Derivatives are instruments that can be complex and highly volatile, have some degree of unpredictability (especially in unusual market conditions), and can create losses significantly greater than the cost of the derivative itself.

- **Hedging risk:** Any measures taken to offset specific risks will generate costs (which reduce performance), could work imperfectly or not at all, and if they do work will reduce opportunities for gain.

- **Illiquid securities risk:** Certain assets held in the Fund could, by nature, be hard to value or to sell at a desired time or at a price considered to be fair (especially in large quantities), and as a result their prices could be very volatile.

- **Operational risk:** Human error or process/system failures, internally or at our service providers, could create losses for the Fund.

- **Underlying fund risk:** To the extent that the Fund invests in shares of other funds, it takes on the one-time and ongoing costs of those shares. It also takes on the risks of those shares, including the derivatives risk and counterparty risk arising from any embedded derivatives (which are common in ETFs).

- Full information on the risks applicable to the Fund is detailed in the Prospectus.
